

## PNEUMATIC CHUCK CHARACTERISTICS

- Can be Taylor made to your particular requirements, from 3" to 16".
- The pneumatic cylinder pushes the lugs gently and homogenously, allowing a constant gripping force during the work. Working pressure range 2-6 bars. You can use it for winding or unwinding applications.
- The air valve can be positioned in axial or radial position, according with your needs.
- The widest range of adapters, with easy and quick assembly.
- Flanges can be adapted to any roll-stand.
