

TOTALGRIP CORE CHUCK CHARACTERISTICS

The TotalGrip Core Chuck allows the reuse of reels 5/6 times, thanks to the big contact surface of the lugs. Other advantages of this chuck:

- Can be tailor-made to your particular requirements, from 3” to 16”.
- The gripping force is applied from the beginning on the core and it is constant during the work. You can use it for winding or unwinding applications.
- Very low maintenance required. There are no internal parts that can collapse due to dust.
- The core is easier to remove (reducing changing times) because the design of the lug and the internal components ensures that the lug is “recessed” when not in use.
- The TotalGrip lugs with his big contact surface, do not damages the internal part of the core, so you can reuse the reels as many times as you need.

- Flanges can be adapted to any roll-stand.
